

EVACU B Warranty

Doro Inc. is the exclusive manufacturer of the baby evacuation device known as the “Evacu B”

Therefore Doro provides the following warranty.

1. The standard warranty is two years on parts.
2. The EVACU B is constructed of several materials that would have a much longer life cycle, ie: the frame, skis, brake shoes, brake handle & flanges all are constructed of aluminum and have an undetermined life cycle.
3. Other components like the main apron is made of, Vinyl Tarpaulin with 100% Polyester Woven Scrim, Fire Retardant to a safety standard 302 NFPA 701, Mildew resistance, and is rated to withstand ultraviolet light for greater than 1,000 hours.
4. Standard washing instructions are to be followed, and DO NOT use bleach or vinegar for cleaning. These will degrade the fabric over time causing discoloration and a shorter life span. ONLY use mild dish soap for cleaning.
5. The non-marking rubber wheels will provide five years of service.
6. Finally the head rest is constructed of high density Hypoallergenic Zotefoam material which is physically expanded and is used in skin contact and medical applications.
7. With this information it is assumed that the Evacu B will provide five years of service, for the following reason; it is stored indoors, and used only a few times a year for training purposes. Then used for the real evacuation.
8. To maintain the warranty the hospital is required to email the Training check off annual inspection by October 1st. of each year.
9. Each case is unique, if a hospital has an issue with the Evacu B please contact Doro at 1.866.554.3676 or sales@dorosecurity.com .
